

ePayment API Integration Checklist

Partner name: Vio (Tipio AS) - platform partner

Merchant Serial Number (MSN): 545865 (NewCo AS - test sales unit opened for Vio as partner)

Description of the solution: **Vio Commerce: shoppable media (products sold inside articles, video pages, Vev pages, apps) on behalf of many merchants, one sales unit each. ePayment via WALLET/WEB_REDIRECT with profile sharing and Express (fixed or dynamic shipping), webhooks**

Endpoints to integrate <i>See the Quick Start guide for examples.</i>	Your Reference ID	Date of request
Example	65432100000000001	15/01-20xx
Create payment POST:/epayment/v1/payments	VIO-75eb28a5-d012-425d-9a72-f675b4e8e3cb	2026-10-06
Create payment with Express <i>Must be filled out if feature is used</i> POST:/epayment/v1/payments	VIO-b41ffb12-7cf5-49bc-a9b3-a6ecb8311f48	2026-10-06
Create payment with Profile sharing <i>Must be filled out if feature is used</i> POST:/epayment/v1/payments	VIO-75eb28a5-d012-425d-9a72-f675b4e8e3cb	2026-10-06
Create payment with Minimum user age <i>Must be filled out if feature is used</i> POST:/epayment/v1/payments	not used	-
Get payment GET:/epayment/v1/payments/{reference}	VIO-75eb28a5-d012-425d-9a72-f675b4e8e3cb	2026-10-06
Get payment event log GET:/epayment/v1/payments/{reference}/events	VIO-75eb28a5-d012-425d-9a72-f675b4e8e3cb	2026-10-06
Cancel payment POST:/epayment/v1/payments/{reference}/cancel	VIO-7fe79ec2-69fa-4e58-97ab-7b5e89617659	2026-10-06
Full capture payment POST:/epayment/v1/payments/{reference}/capture	VIO-54973365-24f2-4c9e-a0e7-08755373c9b5	2026-10-06
Partial capture payment- POST:/epayment/v1/payments/{reference}/capture	VIO-75eb28a5-d012-425d-9a72-f675b4e8e3cb	2026-10-06
Full refund payment POST:/epayment/v1/payments/{reference}/refund	VIO-54973365-24f2-4c9e-a0e7-08755373c9b5	2026-10-06
Partial refund payment- POST:/epayment/v1/payments/{reference}/refund	VIO-75eb28a5-d012-425d-9a72-f675b4e8e3cb	2026-10-06

Quality assurance	Add your comments
Implement both webhooks and polling Use both webhooks and polling to ensure that the user gets the correct status as soon as possible. Set up polling as fallback in case of delayed webhooks. To minimize polling, you must also implement the Webhooks API to receive real-time updates on payment status changes. The merchant must also always poll GET:/epayment/v1/payments/{reference} to check the status of the payment. <i>Please describe your webhook and polling implementation</i>	All eight epayments.payment.*.v1 webhooks registered per sales unit (and for all sales units under the partner in production), signature verified (HMAC-SHA256 over POST\n{path}\n{date};{host};{content-sha256}, current + previous secret) and deduplicated by event id. The shopper's return polls GET /epayment/v1/payments/{reference} until a final state; a sweep re-reads every open payment every 10 minutes. Webhook, return, poll and sweep call the same idempotent handler under a database lock, so the order is created exactly once, whichever arrives first.
Handle payment states and events Make sure to handle all responses and states from the payment: CREATED, AUTHORIZED, ABORTED, EXPIRED, TERMINATED and the event CANCELLED, CAPTURED and REFUNDED.	☒ CREATED ☒ AUTHORIZED ☒ ABORTED ☒ EXPIRED ☒ TERMINATED ☒ CANCELLED ☒ CAPTURED ☒ REFUNDED
Handle errors Make sure to handle all errors. All integrations should display errors in a way that the users (customers and merchant employees/administrators) can see and understand them. <i>Please give examples on how your solution display errors to users</i>	Shopper: "Betalingen ble avbrutt eller feilet. Vennligst prøv igjen." on return when the payment is not AUTHORIZED. Merchant: Vipps' reason on the order page (e.g. "Vipps: 0 left to capture on this payment"). Developer: VippsApiError with HTTP status, type/title/detail and traceId from Vipps' error body.
Proper logging All integrations should log error responses to be used for later reference in troubleshooting. Logs must include endpoint, headers, request body, error code and message. <i>Please supply an example from your logs</i>	[VippsConnector.call] POST /epayment/v1/payments/{reference}/capture -> 400 {"type":"...", "title":"...", "detail":"...", "traceId":"..."} headers {Vipps-System-Name: Vio, Vipps-System-Version: 1.x, Vipps-System-Plugin-Name: vio-commerce-shopcart, Vipps-System-Plugin-Version: 1.x, Idempotency-Key: cap:{reference}:{amount}} body {"modificationAmount":{"currency":"NOK","value":"..."}} (secrets masked).
Include HTTP headers Send the HTTP headers in all API requests for better tracking and troubleshooting (mandatory for partners and platforms). <i>Please insert the value for the Vipps system headers</i>	Vipps-System-Name: Vio - Vipps-System-Version: <shopcart version> - Vipps-System-Plugin-Name: vio-commerce-shopcart - Vipps-System-Plugin-Version: <plugin version>
Add information to the payment history We recommend adding order details to the payment. This is a great benefit for the end user experience. It is also mandatory for merchants using Content monitoring. <i>Please supply an example of order details if you utilize this.</i>	Receipt sent after the order via POST /order-management/v2/ecom/receipts/{reference}: orderLines (name, id, quantity, totalAmount, totalAmountExcludingTax, totalTaxAmount, taxPercentage, productUrl), a shipping line, bottomLine {currency, receiptNumber = Vio order id}.
Specify customer interaction For instore solutions it is required to specify the customer interaction by setting "customerInteraction: "CUSTOMER_PRESENT" on payment initiation. This is to determine that the customer is present at the time of purchase. <i>Please supply an example of a payment initiation request which includes this.</i>	Online only: every payment is created with "customerInteraction": "CUSTOMER_NOT_PRESENT", "userFlow": "WEB_REDIRECT", "paymentMethod": {"type": "WALLET"}.
Sign up for operational updates Subscribe to the Vipps MobilePay Operational Status Page for real-time updates on service availability, incidents, and maintenance.	☐ We have registered for the operational updates

Avoid integration pitfalls	Add your comments
Send a useful reference id Follow our reference recommendations . <i>Please explain the format of your reference id</i>	VIO-<checkout uuid> by default (merchant may set a prefix + short id), unique per sales unit, matching ^[a-zA-Z0-9-]{8,64}\$; a retry appends -2, -3. The same reference is shown on the order in Vio and in the merchant's shop.
Handle redirects The merchant must handle that the returnUrl URL is opened in the default browser on the phone, and not in a specific browser, in a specific tab, in an embedded browser, requiring a session token, etc. Follow our recommendations regarding handling redirects . <i>Please acknowledge that your system does not rely on session tokens etc.</i>	Acknowledged: the returnUrl carries the checkout id as a query parameter and the result is read from the API (GET payment), not from a cookie or session token, so any browser or tab completes the flow.
Complete capture before expiration date For reserve capture payments, ensure to complete captures before the reservations expires. Once a reservation is expired it is no longer possible to capture. <i>Please explain your capture logic to ensure you capture before expiration</i>	Capture at payment or at shipment is done by Vio (tracking number or order completion from the merchant's shop or the dashboard), never above the reserved amount. Merchants on "capture on account" see the reservation and a Capture button on the order page; the receipt and the reservation window are shown there.
Cancel authorized payments that will not be captured Authorized payments that will not be captured must be cancelled to ensure that the amount is not unnecessarily reserved on the users bank account. It is the merchant/partners responsibility to cancel the authorized payments using POST:/epayment/v1/payments/{reference}/cancel <i>Please explain your cancel logic to ensure no payments are left in reserved state</i>	A cancelled order releases the reservation (or refunds what was captured). A paid reservation whose order could not be created after 24 hours is released by the sweep automatically and the failure logged. Aborted/expired payments close the checkout.
Handle cross-border payments Vipps MobilePay is available to users across the Nordic countries and offers cross-border payments . Merchants must be able to handle customers from outside their country. <i>Please acknowledge that you are ready to handle cross-border payments</i>	Acknowledged: shipping options and allowedCountries follow the merchant's rates per country; payments in NOK; the shopper's country comes from Vipps' userDetails/shippingDetails.
Follow the design guidelines The Vipps MobilePay branding must be according to the design guidelines . <i>Please acknowledge that you have read and used the design guidelines</i>	☒ We acknowledge that we have read and are using the design guidelines
Educate your customer support Make sure your customer support has all the tools and information they need available in your system, through the APIs listed in the first item in this checklist, and that they do not need to visit portal.vippsmobilepay.com for normal work. <i>Please explain how you educate your customer support to handle Vipps MobilePay transactions and which tools they have available</i>	The order page shows the Vipps payment as Vipps sees it (reserved, captured, refunded, released, reference, event history) and offers Capture / Refund / Release; the reference is shown on every order. Support works in Vio through our API; the portal is not needed for daily work.

Technical documentation	Add your comments
Provide technical documentation for merchants regarding: (Share a URL, plain text or PDF of the documentation)	
- How to apply for products	Merchant guide, section 1 (apply through Vio as partner, or connect an own Vipps account) - text attached.
- How to configure and use the solution	Merchant guide, section 2 (Settings -> Payments -> Vipps: Express, shipping options, capture mode, refunds/cancellations, reference format, webhook) - text attached.
- Frequently Asked Questions (FAQs) for merchants	Merchant guide, section 5 (FAQ) - text attached.
Demo of your solution Showcase your solution, either with a link to a demo store, provide a video pr screenshots (PDF is preferred)	Demo store (test sales unit 545865): https://vio-vipps-test.vercel.app - Express from a product and Vipps from the checkout; video of the full flow attached.

Partners, please send your checklists to developer@vippsmobilepay.com. Include example reference IDs from the test environment and a description of the implemented solution.

We will verify the integration and contact you. After the checklist is approved, you'll receive all necessary information from partner@vippsmobilepay.com.
